COVER LETTER

Date: April 21, 2026

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Developer – Contract role at GovTech Barbados. I recently graduated from the Indian Institute of Technology (IIT) Patna, one of India's premier engineering institutions, and have hands-on experience building scalable digital services in a government-focused environment. Notably, I worked as a Backend and AI Systems Developer on the World Bank-supported PoCRA initiative in collaboration with the Government of Maharashtra, where I contributed to the development of technology systems for public service delivery.

During this engagement, I worked on the MahaVistaar chatbot platform, where I architected and enhanced middleware and RESTful APIs using Python and FastAPI. This enabled seamless integration across services and improved backend performance and reliability. In addition, I developed a React-based dashboard used by government officers to monitor chatbot adoption, engagement, and operational metrics across regions, supporting data-driven decision-making at scale.

My experience also includes building robust, production-grade systems such as a computer vision-based anti-spoofing pipeline for document verification using OpenCV. I designed secure and reliable processing workflows incorporating techniques like Moiré pattern detection, reflection analysis, and metadata validation. This work strengthened my ability to build scalable pipelines and ensure system integrity in real-world deployments.

I bring strong proficiency in full stack development, including JavaScript (React), Python, REST APIs, and databases like MongoDB and SQL. I am comfortable working in collaborative, multidisciplinary environments and follow best practices around clean code, testing, and documentation. I also have experience contributing to reusable components and system design decisions, aligning with the need to build maintainable and extensible platforms.

What excites me most about this role is the opportunity to help shape digital public infrastructure from the ground up. My prior experience working on government initiatives has given me a practical understanding of balancing speed, scalability, and stakeholder needs—something I see reflected strongly in your mission.

I would welcome the opportunity to contribute to GovTech Barbados by building secure, scalable, and user-centric digital services. Thank you for your time and consideration.

Yours faithfully,

Divyanshee Verma
